Op-ed: Albany blows a chance to streamline city projects

In this Crain's op-ed, CUF's Adam Forman calls out the New York state legislature's failure to pass a bill allowing cities to benefit from "design-build" contracting for public works, noting that state agencies already enjoy this advantage. In New York City, where infrastructure projects regularly blow through budgets and deadlines, design-build offers an opportunity to save time and reduce costs.

by Adam Forman

Over the past 25 years, the number of city residents has grown by 17 percent and tourism has doubled. Little wonder that New York City's roads, subways, bridges, sidewalks, and utility lines are overtaxed. Today more than ever, expanding and fortifying the city's transportation, utilities, building stock, and coastline is essential. Yet the city remains hampered by an outdated rule that prevents local agencies from combining the design and construction of major projects into a single proposal.

In this [op-ed](#) for *Crain's*, CUF Senior Researcher Adam Forman argues that a design-build approach to contracting could save New York City millions. Without dramatically reducing construction costs and timelines, crucial infrastructure investments will languish, with grave consequences for the city's health, safety, and economy.
